6. The spacing between the text component and circles should be 90px. - Fixed
7. The spacing between circles should be 21px. - Fixed

## C. Text L1

### Merative's Mission

When it comes to health organizations, it's not just their best for people, patient care, but also their ability to help patients and employees, improve their lives or clinical risk, participate, and share their data. Making and progress takes time, and a major investment in care. It takes knowing and connecting, understanding their needs and understanding their needs.

That's why at Merative, we're committed to building a more connected, more in health. One where you can see the whole picture – and its pieces – and the biggest opportunity, growth, and security.

### How Merative helps

The plan to build an evidence, government, business, health data, and the business case for the future of their health data.

Here's how we do it. First, we take the sting out of data management by creating and organizing your data, then we help you understand and act on that data – generating actionable insights that you can use to inform clinical, operational, and financial decisions. Then, we help other areas of your organization that offer new opportunities for collaborating with stakeholders.

This report is meaningful change – for members, patients, partners, and the system as a whole across the system of care.

We put people at the center of health.

You are a patient at a hospital, a member of a health plan, a citizen of a state, and maybe even a participant in a clinical trial. But who has a complete view of your health journey? Merative places people at the center of health by reexamining information around individuals. This helps health leaders have a comprehensive view of the people they serve and make more informed decisions.

With our clients – providers, payers, life sciences and governments – we work to improve healthcare delivery and performance for better experiences.

[See our latest features](#)

Our expertise + technology drives shared progress in health.

We make data accessible by integrating how IT is organized and added to systems. On this solid data foundation, we apply advanced analytics and AI to reveal insights. You can use these insights to improve health outcomes across the system of care.

We also provide rich patient- and population-level data sets to help you benchmark and find opportunities to do even better.
